## **Introduction to Electroacoustic Music**

### Project 2: Instrument Design

Compose a piece no shorter than 60 seconds in duration using synthesized sounds. Even though you are free to use any sound sources and manipulation techniques, the focus should primarily be on the synthesized sounds. The recommended software to use for this project is Reason. Use the instrument plug-ins available to create your own individual instruments by applying various filters, modulators, etc. and use the instruments to create your composition. The purpose of this project is to get familiar with the sound world that emerges through sound synthesis and computer music, and to discover the vast range of facilities that today's software brings about to ease the process of electronic sound generation.

Project due date: Wednesday, Nov. 10
